Temporary Building Approved

Denison Mines (USA) Corp. (Denison) recently requested approval to construct a temporary building to house the existing pumping equipment at the Tony M Phase 1 Evaporation Pond. This would be a temporary structure, measuring 28' long, 12' wide and 10' high, the purpose of which would be to protect the pumping equipment from the elements, i.e. sun, wind. The temporary building would be located within the evaporation pond area that is already fenced and has been disturbed. The pumping equipment is already in place and the structure would be added at the existing equipment location.

This letter approves the addition of the temporary building as described above. The building would be located in an area that has already been analyzed as part of the Approved Tony M Phase 1 Plan of Operations and is considered reasonably incident to the Phase 1 Operations. All Conditions of Approval as set forth in the Plan of Operations Approved, dated September 4, 2007, for Denison's Tony M Phase 1 Operations still apply. As a Condition of Approval for the Temporary Building, Denison will be required to remove the building and reclamation will be completed at the cessation of operations and as already identified for the fenced evaporation pond currently in place.

A financial guarantee for the Tony M Phase 1 Mine is held jointly by the State of Utah, Division of Oil, Gas, and Mining (UDOGM) and the Bureau of Land Management (BLM). As the temporary building is small and located in an already disturbed area, any increase to the financial guarantee deemed necessary for the addition of this building will be addressed in conjunction with UDOGM's next permit renewal.

If you have any questions regarding this approval, please contact me at 435-542-3461.

Sue Fivecoat
Assistant Field Manager
